

Personal data

Full name Mikhail Orekhov
Address Florian-Geyer Str. 9, 97421 Schweinfurt, Germany
Telephone +49 172 5327961
E-mail m.v.orekhov@gmail.com
LinkedIn www.linkedin.com/in/mikhail-orekhov-doxy

GitHub <https://github.com/Gw1n>

Date of birth June 21, 2003, Moscow, Russia

Education

October 1, 2024 – present Robotics (Bachelor of Engineering),
Expected ending: Technische Hochschule Würzburg-Schweinfurt (THWS), Germany
28.02.2028
01.09.2021 – 15.04.2025 High-tech plasma and energy installations (unfinished),
Bauman Moscow State Technical University (MSTU), Russia
01.09.2010 – 30.06.2021 Secondary general education,
State Budgetary Educational Institution School No. 444

Practical experience

Personal projects:

1. Platform for automated generation of CI/CD pipelines (Full-Stack)

- **Description:** Developed a web application to simplify the creation of complex CI/CD pipelines with a focus on DevSecOps.
- **Achievements:** Implemented a full automation cycle, including syntax checking, security testing, and deployment. Ensured high fault tolerance and scalability through containerization and cloud infrastructure.
- **Stack:**
 - **Frontend:** Next.js.
 - **Backend:** Python/Django (OOP), Celery Worker (Redis).
 - **DevOps/Cloud:** AWS, Docker Compose, CI/CD (GitHub Actions), DevSecOps, Nginx, PostgreSQL.

2. A set of web applications for automating a startup's technical support service

- **Description:** Created a group of web applications to optimize the work of the technical support service (task distribution, knowledge base, KPI calculation).
- **Achievements:** Configured a fault-tolerant container architecture with automated deployment and security testing. Implemented comprehensive monitoring, alerting, and centralized log collection for proactive management.
- **Stack:**
 - **Development:** Next.js, Django.
 - **DevOps/M/L:** Docker Compose, CI/CD (GitHub Actions), Monitoring/Alerts (Prometheus, Grafana, Discord), Log Collection (PLG Stack), PostgreSQL.

3. Asynchronous monitoring and alerting based on Telegram

- **Description:** Developed a lightweight asynchronous system for monitoring website statuses with instant alerts.

- **Achievements:** Ensured high-speed scanning of multiple resources using an asynchronous architecture. Created an effective notification channel via a Telegram bot for rapid incident response.
- **Stack:** Kotlin, Asynchronous programming, Telegram Bot API.

Educational projects:

1. **Arduino Line-Follower (Low-level Programming)**
 - **Description:** Developed a motion control system for a mobile robot based onArduino.
 - **Achievements:** Ensured error-free movement of the robot in various training conditions.
 - **Stack:** Arduino (register language)
2. **Machine Vision & KUKA Simulations (MATLAB)**
 - **Description:** UsedMATLAB And Robotics ToolBoxto simulate the operation of industrial robots, for the purpose of subsequent configuration and calibration of a real industrial manipulator.
 - **Achievements:** As a result of the simulation, a program was created for the operation of an industrial manipulator used in production.
 - **Stack:** MATLAB, Robotics ToolBox.
3. **Industrial Robot Testing (RoboDK)**
 - **Description:** Designed robot work cycles in the environmentRoboDK, creating a digital twin of the process for the purpose of subsequent debugging and optimization.
 - **Achievements:** Using a process twin, the manipulator's trajectory was optimized, resulting in a 43% time savings within a single production cycle.
 - **Stack:** RoboDK.

		Skills
Category	Skills (Technology, tools)	Level
DevOps & Cloud	Infrastructure as Code (IaC): Terraform, Ansible	Advanced
	Containerization: Docker, Docker Compose	Advanced
	CI/CD: GitHub Actions, Jenkins	Experienced
	Monitoring/Logging: Prometheus, Grafana, Alert Manager, PLG Stack, ELK Stack	Experienced
	Cloud platforms: AWS	Advanced
	OS: Linux (Ubuntu, CentOS)	Experienced
Full-Stack Development	Python (OOP): Django, OpenCV, Pandas, NumPy	Experienced
	JavaScript (OOP): Next.js, React	Experienced
	SQL: PostgreSQL, database administration (including migration, optimization, data management)	Experienced
	C++: OOP, STL Component Library	Average
Robotics & Engineering	Simulation/Modeling: RoboDK, Matlab (RoboticsToolbox, Image Processing Toolbox)	Base
	Electronics: Arduino (circuit making, register programming), Soldering	Average
	CAD/3D modeling: Autodesk Inventor, SolidWorks	Experienced
General Tools	Git	Advanced
	Microsoft Office	Experienced
Languages	English: C1	Advanced
	German: B1	Average
